

Initiatives and Solutions for Wood Fuel Supply Clusters

As a forest owner, you may unknowingly possess large reserves of wanted raw material in your forests. Due to climate and energy politics, demand for energy wood has increased enormously all around the Europe. Somebody out there might be very willing to burn all the wood you can supply. And yes – he will pay for it.

Through AFO project's activities, potential wood fuel suppliers and users will be brought together to build up actual business relationships. By attending our activities, you get an excellent opportunity to meet new buyers of wood, to network with potential supply cluster partners and to learn more about modern energy wood harvesting and procurement systems – in an international context. In the process, you will have access to the vast experience and know-how provided by our Austrian and Finnish partners.

AFO is an EU/IEE-funded bioenergy promotion project, carried out during 2009-12. AFO operates in Austria, Finland, France, Latvia, Slovenia and The United Kingdom. In the UK, our chosen target region is South Yorkshire.

Read more about AFO activities on our web site and contact us.
