Forestry Commission

National Forest Inventory of Great Britain

Survey Manual

June 2014

Contents

Chapter 1.0 Introduction

1.0 Introduction 2
1.1. Purpose of the Fieldwork and Required Outputs 4
1.2. Field Data Collection Hierarchies 6
1.2.1. Definitions 7
1.2.1.1. Square 7
1.2.1.2. Section 7
1.2.1.3. Component Group 7
1.2.1.4. Component 7
1.2.1.5. Sub-Component 7
1.2.1.6. NFI Treed Section 7
1.2.1.7. Plot 8
1.2.1.8. Linear Features 8
1.2.1.9. Point Features 8
1.2.1.10. Relevant Adjacent Stand 8
1.3. Bid Areas 9

Chapter 2.0 Editing the NFI Sample Square in Forester

2.0 Editing the NFI Sample Square in Forester 3
2.1. Toughbook Login 3
2.2. Opening ArcMap 3
2.2.1. Adding toolbars and individual tools 3
2.2.1.1. Adding toolbars 3
2.2.1.2. Adding individual tools 4
2.3. Logging On to Forester and Loading in the Square Geodatabase 6
2.4. Opening the Map Schema to Load in Background Data 8
2.4.1. Opening the default NFI map schema 8
2.4.1.1. Zooming in to the square 9
2.4.2. Personalising the map schema 11
2.4.2.1. Changing the symbology of individual layers 11
2.4.2.2. Making the OS10k layer transparent 12
2.4.2.3. Changing the order of the layers in the Table of Contents 13
2.4.2.4. Changing the scale thresholds for individual OS map and aerial photo layers 13
2.4.3. Saving the personalised map schema 14
2.4.4. Importing the personalised map schema into other squares 15

2.4.4.1. Exporting the personalised map schema 15
2.4.4.2. Importing the personalised map schema to a new square 17
2.4.5. Background data folder structure 18
2.4.6. Swapping between Bid Areas 19
2.5. Starting the Forester Data Editor Session 20
2.6. Validating Edits 22
2.6.1. Validation Errors 22
2.6.2. Using the "Validate features in edit area" tool 23
2.6.3. Using the "Show Invalid Items" tool 26
2.6.3.1. Checking for errors in the Section data for an individual Section 27
2.6.3.2. Checking for errors in the Plot data for an individual Section 28
2.6.4. Using the "Validate Edits" tool 30
2.7. Saving Edits 31
2.7.1. Using the Save Edits button 31
2.7.2. Using the Save Session button 31
2.7.3. Abandoning the Forester Data Editor session 32
2.8. Logging Off from Forester 33

Chapter 3.0 Square data

3.0 Square Data 2
3.1. Accessing the Square Data Fields 2
3.2. Completing the Square Data Fields 3
3.2.1. Visit Status 3
3.2.2. Access Status 4
3.2.2.1. Accessible squares 4
3.2.2.2. Inaccessible squares: visual assessment possible 8
3.2.2.3. Inaccessible squares: NO visual assessment possible 9
3.2.3. Square accessibility flowchart 10
3.3. Adding a Square Photo 11
3.3.1. Resizing a photo 11
3.3.2. Adding a photo into Forester 13
3.3.3. Completing the photo data fields 15

Chapter 4.0 Section Identification

4.0 Section Identification 4
4.1. Section Types and the Level of Assessment Required 4
4.2. Distinguishing between NFI and Non-NFI Land 5
4.2.1. Definition of NFI Woodland 6
4.2.2. Definition of Non-NFI land 6
4.2.2.1. Definition of Non-NFI Woodland 6

4.2.3. The 2010 NFI Woodland Map 8
4.2.3.1. 4.2.3.1 Interpreted Forest Types and Interpreted Open Areas 10
4.2.4. NFI Woodland identification rules 12
4.2.4.1. Orchards 12
4.2.4.2. 4.2.4.2 Tree nursery and short rotation coppice (Biofuel) crops 12
4.2.4.3. Christmas tree crops 13
4.2.4.4. Temporarily unstocked woodland areas 14
4.2.4.5. Shrub land 14
4.2.4.6. Open areas (holes) totally enclosed by NFI Woodland 15
4.2.4.7. Open areas (gaps) at the edge of NFI Woodland 16
4.2.4.8. Sealed roads and driveways 17
4.2.4.9. Unsealed roads, tracks and driveways 18
4.2.4.10. Unsurfaced tracks and rides 19
4.2.4.11. Operational railway tracks (any gauge) 19
4.2.4.12. Disused railway tracks (any gauge) 19
4.2.4.13. Rivers and canals 20
4.2.4.14. Overhead powerlines (all voltages) 20
4.2.5. NFI Woodland mapping rules 21
4.2.5.1. NFI Woodland external boundary 21
4.2.5.2. NFI Woodland protrusions 22
4.2.5.3. Connecting bridges ("necks") between woodlands 24
4.3. Distinguishing between Treed and Open areas 24
4.3.1. Treed Areas 24
4.3.2. Open (Non-treed) Areas 25
4.3.2.1. Definition of permanent open space 26
4.3.2.2. Definition of temporary open space 27
4.4. Classification of land beneath Linear Features 27
4.4.1. Sealed roads 27
4.4.2. Unsealed roads 27
4.4.2.1. Maintained unsealed roads 27
4.4.2.2. Unmaintained unsealed roads 28
4.4.3. Unsurfaced tracks and rides 28
4.4.4. Railway tracks (any gauge) 28
4.4.4.1. Operational railway tracks 28
4.4.4.2. "Disused" railway tracks 28
4.4.5. Rivers, streams and canals 29
4.4.6. Overhead powerlines (all voltages) 29
4.5. Minimum Section Size 30
4.6. Summary of Sectioning Procedure 31
4.7. Section Boundaries 31
4.7.1. Boundary lines 31

4.7.1.1. Square boundary 31
4.7.1.2. Landuse changes: the interface with/between land that is non-woodland 31
4.7.1.3. Drip line 33
4.7.1.4. Sphere of influence 33
4.7.2. Multiple storeys and silvicultural systems 35

Chapter 5.0 Section Mapping in the Field
5.0 Section Mapping in the Field 2
5.1. Modify Section Boundaries 3
5.1.1. Select the Section boundary to be modified 3
5.1.2. Move individual vertices 4
5.1.3. Moving nodes 5
5.1.4. Delete individual vertices 5
5.1.5. Insert individual vertices 5
5.1.6. Modifying Section boundaries after mensuration plots/points have been generated 6
5.2. Merging Sections 7
5.2.1. Merging Sections after mensuration plots/points have been generated 10
5.3. Splitting Sections 11
5.3.1. Exploding a multi-part Section 14
5.3.2. Splitting Sections after mensuration plots/points have been generated 15
5.4. Reshape Section Boundaries 15
5.4.1. Re-shaping Section boundaries after mensuration plots/points have been generated 17
5.5. Slide Section Boundary Nodes 18
5.5.1. What are Section boundary nodes? 18
5.5.2. Sliding boundary nodes 18
5.5.3. Sliding Section boundary nodes after mensuration plots/points have been generated 20

Chapter 6.0 Section Boundary Editing in the Software
6.0 Section Boundary Editing in the Software 2
6.1. Selecting a Section (Section Sub-Compartment) 2
6.2. Data Entry 2
6.2.1. Accessible/Inaccessible flow chart for Section level assessments 2
6.2.2. Data to be entered depending upon accessibility 4
6.2.3. Section data entry fields 5
6.2.4. Visual Deadwood Estimation 7

Chapter 7.0 Component Groups
7.0 Component Groups 2
7.1. What is a Component Group? 2

7.1.1. Examples of Component Groups within a Section 4

Chapter 8.0 Components

8.0 Components 5
8.1. Component Attributes 5
8.2. Component Attribute Data Entry 8
8.2.1. Ancient Woodland Identification 13
8.3. Multiple Components 17
8.3.1. Add Component 17
8.3.2. Delete Component 17
8.3.3. Clone Component 17
8.4. Component % Area 18
8.5. Interpreted Forest Types and Interpreted Open Areas 26
8.6. Land Use 28
8.6.1. What Is Land Use? 28
8.6.2. Land Use Codes 28
8.6.3. How does the surveyor decide what Land Use to enter? 32
8.7. Broad/Priority Habitat 35
8.7.1. Treed Sections and Component Groups 35
8.7.1.1. UKBAP Habitat type 36
8.7.2. Non-treed Sections and Component Groups 37
8.7.2.1. UKBAP Habitat type 37
8.7.3. NFI BROAD and Priority Habitats 40
8.7.3.1. UK Biodiversity Action Plan (UKBAP) 40
8.7.3.2. UKBAP Broad Habitats 40
8.7.4. UKBAP Priority Habitats 41
8.7.4.1. Priority Habitat Descriptions 41
8.7.4.2. Habitat Action Plans 41
8.7.4.3. Woodland Priority Habitat qualifying criteria 41
8.7.4.4. Lowland Beech and Yew Woodland Priority Habitat 42
8.7.4.5. Native Pine Woodlands Priority Habitat 43
8.7.4.6. Distinguishing between upland and lowland habitat types 43
8.7.5. Relationship between Broad and Priority Habitats 44
8.7.5.1. Woodlands 44
8.7.5.2. Grasslands 45
8.7.5.3. Arable and horticultural 45
8.7.5.4. Bogs, fens and marshlands 46
8.7.5.5. Boundary and linear features 46
8.7.5.6. Heath and montane 47
8.7.5.7. Rock 47
8.7.5.8. Freshwater 48
8.8. Storey assessments 74

8.8.1. How to assess Storeys 74
8.8.1.1. Use of Mid-crown Height or Total Height 74
8.8.1.2. Banding to define storeys 77
8.8.1.3. Gap distance to distinguish individual Storeys 78
8.8.1.4. Gap Distance to use in order of priority 78
8.8.1.5. Single trees as a Storey 80
8.8.2. Storey Labels 81
8.8.3. Storey Definitions 81
8.8.4. Young Tree Storey 81
8.8.5. Leaning and Windblown trees 82
8.8.6. Standing Dead Trees 82
8.8.7. Multiple storeys from the same root stock 83
8.8.8. Defining and Recording Storeys within Sections with more than one Component Group 83
8.8.9. Storey assessments on slopes and undulating ground 88
8.9. NFI Tree Species list 89
8.10. Planting Year Estimation 93
8.10.1. Methods of Ageing Trees 93
8.10.1.1. Estate/Owner Information 93
8.10.1.2. Whorl Counting (Conifers) 93
8.10.1.3. Flattened and stag tops 94
8.10.1.4. Bracketing (Mature conifers) 94
8.10.1.5. Young Conifers 95
8.10.1.6. Branching Patterns 96
8.10.1.7. Annual Growth Scar Counting (Broadleaves) 96
8.10.2. Date of Earliest Planting 97
8.10.2.1. Earliest Planting Dates for Conifers 97
8.10.2.2. Earliest Planting Dates for Broadleaves 98
8.10.2.3. Stump ring counting 98
8.11. Stems per Hectare 99
8.11.1. Coppice stools 99
8.11.2. Maidens/Standards 99

Chapter 9.0 Sub-Component Data

9.0 Sub-Component Data 3
9.1. Treed Components 3
9.2. Non-treed Components 4
9.3. Photo 5
9.4. Vegetation 7
9.4.1. Ground Layer categories 9
9.4.2. Field Layer categories 10
9.4.3. Shrub Layer 11
9.4.4. Shrubs acting as trees 13
9.4.5. Adding, Deleting and Cloning records 14
9.4.6. Validation 14

9.5. NVC 16
9.5.1. Woodland NVC 16
9.5.2. NVC Keys 17
9.5.3. Beech NVC communities 18
9.5.4. Pine NVC communities 18
9.5.4.1. Pine bog woodland 18
9.5.5. NVC community assessment 20
9.5.5.1. Recommended steps 20
9.5.5.2. NVC surveying issues 21
9.5.6. NVC KEY 22
9.5.6.1. NVC Key for Native Woodlands 23
9.5.6.2. NVC Key for Plantation 40
9.5.7. Adding, Deleting and Cloning records 52
9.6. Browsing Damage 53
9.6.1. Adding, Deleting and Cloning records 53
9.7. Bark Stripping Damage 54
9.7.1. Adding, Deleting and Cloning records 54
9.8. Tree Health 55
9.8.1. Adding, Deleting and Cloning records 56
9.9. Tree Pest/Disease 57
9.9.1. Adding, Deleting and Cloning records 59
9.10. Manual Intervention 60
9.10.1. Adding, Deleting and Cloning records 63

Chapter 10.0 Growing Stock Components
10.0 Growing Stock Components 2

Chapter 11.0 Social Indicators
11.0 Social indicators 2
11.1. Recreation 2
11.2. Amenity Management 3
11.3. Abuse 3
11.4. Fire 3
11.4.1. Adding, Deleting and Cloning records 3

Chapter 12.0 Relevant Adjacent Stands (RAS)
12.0 Relevant Adjacent Stands (RAS) 2
12.1. Native Woodland RAS 2
12.1.1. NFI definition of Native Woodland 2
12.1.2. Mapping of Native Relevant Adjacent Stands 2
12.1.3. How to assess whether a Section/Component group is native 3
12.1.3.1. Canopy Cover 3
12.1.3.2. Basal Area or Stems per Hectare 3
12.2. Whole Section RAS 5
12.3. Create Relevant Adjacent Stand 5

Chapter 13.0 Plot Assessments

13.0 Plot Assessments 2
13.1. Plot Types 3
13.2. Generating Circular plots 5
13.3. Circular plots crossing Square and Section boundaries 6
13.3.1. Section boundaries 6
13.3.2. Square boundaries 7
13.4. Generating Whole Section plots 8
13.5. Points crossing Square and Section boundaries 9
13.5.1. Section boundaries 9
13.5.1.1. Plot Target 9
13.5.1.2. Square boundaries 10
13.6. Data Collection Procedure 10
13.6.1. Circular and Section Plot level data 11
13.6.2. Point 1 data 12
13.7. Inaccessible Plots/Points 15
13.7.1. Definition 15
13.8. Photo 19

Chapter 14.0 Tree & Stump Assessment Procedures

14.0 Tree & Stump Assessment Procedures 2
14.1. Circular Plots – Tree Assessment 2
14.2. Whole Section Plots – Tree Assessment 3
14.3. Tree Data Entry 4
14.4. Mapping the Tree position 10
14.5. Adding new tree records 12
14.6. Linking Height Trees – Circular plots 14
14.7. Stump Assessments 16
14.7.1. Definition 16
14.7.2. Stump Counts – Circular and Whole Section plots 16
14.7.2.1. Stump data entry 17
14.7.3. Mapping & Assessing nearest stump to plot/point centre 18

Chapter 15.0 Diameter (DBH) Assessments

15.0 Diameter (DBH) Assessments 2
15.1. Measuring diameter at breast height on standing trees 3
15.2. Locating the correct DBH point 3

Chapter 16.0 Height and Crown Diameter Assessments

16.0 Height and Crown Diameter Assessments 2
16.1. Assigning Sample Height Trees 2

16.2. Sample Height tree types 3
16.3. Total Height 4
16.4. Height Measurement Conventions 5
16.4.1. Distance from the Tree 5
16.4.2. Assessing Tree Heights on a Slope 6
16.4.3. Assessing Leaning Trees 6
16.5. Crown heights and diameter 7
16.5.1. Crown Heights 7
16.5.1.1. Upper Crown Height 7
16.5.1.2. Lower Crown Height 7
16.5.2. Crown Diameter 8

Chapter 17.0 Crown Occupancy
17.0 Crown Occupancy 1

Chapter 18.0 Transects
18.0 Transects 2
18.1. Young Tree transects 3
18.1.1. Definitions 3
18.1.2. Location of Transect 4
18.1.3. Installing Transect Line (flat ground) 5
18.1.4. Transects on slopes >5° 6
18.1.5. Transect sizes 7
18.1.6. Leaning trees 7
18.1.7. Coppice Trees 8
18.2. Deadwood transects 11
18.2.1. Definition 11
18.2.2. Deadwood Transect Methodology 13

Chapter 19.0 Coppice
19.0 Coppice 2
19.1. Background 2
19.1.1. Simple Coppice 2
19.1.2. Coppice with Standards 2
19.2. How to tell if a Multi-stemmed Tree has been Coppiced 3
19.3. Distinguishing Between Worked and Stored Coppice 3
19.4. Recording Coppice within the NFI 4
19.4.1. Component level data 4
19.4.1.1. Landuse and IFT 4
19.4.1.2. Stump or stool? 5
19.4.1.3. Storeys 5
19.4.2. At Plot level 5

Chapter 20.0 Decay Classes
20.0 Decay Classes 2

20.1. Standing deadwood 2
20.2. Lying deadwood 2
20.3. Stumps 2

Chapter 21.0 Linear Features

21.0 Linear Features 3
21.1. Create Linear Features 3
21.2. Theme Data 4
21.2.1. Initial Data Fields until Theme is chosen 4
21.2.2. Common Data Fields for all Themes 5
21.2.3. Cultural Boundaries Theme 5
21.2.4. Woodland Edge 8
21.2.4.1. Abrupt Edge 8
21.2.4.2. Tapered by Height 9
21.2.4.3. Variable Density Ecozone 10
21.2.5. Transport 10
21.2.6. Recreation 11
21.2.7. Hazards 12
21.2.8. Water features 13
21.2.8.1. Contaminants List 14

Chapter 22.0 Point features

22.0 Point Features 2
22.1. Create Point Features 2
22.1.1. Water Features – Type 4
22.1.2. Veteran Trees 5
22.1.2.1. Veteran Tree Form 6
22.1.3. Hazard 8

Chapter 23.0 NFI-FS Support and Software Upgrade

23.0 NFI-FS Support and Software Upgrade 2
23.1. Purpose 2
23.2. How to carry out an NFI-FS Software Upgrade 2
23.3. In the event of an error or crash with the NFI-FS software 3
23.4. How to resolve and/or log a support issue 4
23.5. Support – Field data collection and QA 4
23.6. Support – GIS, Checking in and Checking out Squares 4
23.7. Support – Database and IT 4
23.8. Support – Contract 4

Examples

Example 7-1: A single storey (e.g. Upper), single species (e.g. Scots pine) section 4
Example 7-2: A single species within the Section but two distinct storey heights separated spatially 5
Example 7-3: A single species within the Section but two distinct storey heights, partially separated spatially but also merging spatially 5
Example 7-4: a two species, 3 storey, Section 6
Example 8-1: One Component Group, One Storey (upper), One Component 18
Example 8-2: One Component Group, Complex Storey, One Component 19
Example 8-3: One Component Group, Complex Storey, Multiple Components 20
Example 8-4: One Component Group, One Storey (upper), Three Components 21
Example 8-5: One Component Group, Two Storeys (upper and lower), One Component per Storey 22
Example 8-6: Five Component Groups, Three Storeys (upper, middle and lower), One or more Components per Storey 23
Example 8-7: Mix of Treed and Open Component Groups 25
Example 8-8: Storey Assessment 79
Example 8-9: Two Component Groups and two storeys, 60% Upper and 100% Lower storey 83
Example 8-10: Two Component Groups and two Storeys, 100% Upper and 60% Lower storey 84
Example 8-11: Four Component Groups and 3 Storeys 86
