

## Knowledge Exchange records from 01/04/2015 – 31/03/2016

### CATEGORY 9 - Media (87 records)

Record ID 4010967  
**Title:** News Release. University of York, 8 September 2015.  
Other titles: Ants on the march in non-native conifer forests  
Company: University of York; Forest Research  
Imprint: 2015  
Main subject: FORESTRY  
Subjects: FCRA CONTRIBUTORS; 2016-FR-CAT-9  
Abstract: A species of ant is thriving in habitats created by thousands of acres of coniferous forest planted in a UK National Park in the last 60 years, according to new research by scientists from the Department of Biology at the University of York and Forest Research, the Forestry Commission's research agency.

**Title: BBC4 - Oak Tree: nature's greatest survivor, 1st October 2015.**  
Author: Casella, E.  
Imprint: 2015  
Main subject: TREE HEALTH  
Subjects: FCRA CONTRIBUTOR; 2016-FR-CAT-9  
Abstract: Interest is mounting in the BBC4 programme due to be shown in October, which is following a year in the life of a 400 year-old native oak tree at Wytham Woods. Dr Eric Casella from Forest Research (The UK Forestry Commission Research Agency) was working with the BBC and the Wytham Woods team on the documentary, which uses innovative filming techniques to reveal the complex and fascinating biology of the oak tree and the lengths it goes to in order to survive. Dr Casella first visited Wytham Woods in August 2014 to laser scan the tree using a technique called Light Detection and Ranging (LiDAR). The scanner shoots out millions of pulses of light in every direction to make a 3D image of an object and its surrounding environment. The tree was rescanned again earlier this year without its leaves and fascinating animations were computer-generated by Eric; available on YouTube <https://youtu.be/1pEFIXSgBvM> - <https://youtu.be/JKLejraBkUA>  
Dr George McGavin, from the Natural History Museum, is presenting the show.

Author: Rinaldi, G.  
Imprint: BBC, 22 March 2016  
Source: BBC Scotland news website  
Subjects: 2016-FR-CAT-9  
Abstract: The student will work with the Forestry Commission and have input from Forest Research.

"The project begins with the night sky and the importance of preserving dark skies for present and future generations," explained Dr Borthwick.

"The Galloway Forest Dark Sky Park is an important resource for Dumfries and Galloway - being one of the few locations to achieve this designation in the western world.

"Dark skies are endangered owing to light pollution and urbanisation."
