

## New Book from CABI

### Forestry and Climate Change

Edited by **P H Freer-Smith, M S J Broadmeadow** and **J M Lynch**,  
Forest Research, UK

October 2007 c. 260 pages Hardback 978 1 84593 294 7

**£70.00/US\$140.00/€110.00**

Subject Classification: KNAL, PDW, PSAF, RGBL, RNPG, TVR

Territorial Market Rights: World

Climate change is one of the greatest challenges we face – both in terms of its potential impact on our societies and the earth, and the scale of international co-operation that is needed to confront it. Emerging as a component of the international dialogue on the environment and climate, the role of forests in influencing earth systems will need to be assessed.

Drawing together perspectives from researchers and policy makers, this book explores how forests will interact with the physical and natural world, and with human society as the climate changes. Also considered is how the world's forests can be managed to contribute to the mitigation of climate change and to maximize the full range of economic and non-market benefits.

Providing an examination of the science, a detailed consideration of the science policy interface and the international frameworks and conventions, this book is valuable reading for all those interested in sustainable forest management, climate change and the associated environmental sciences.

**Audience:**

Policy-makers, scientists, students and all those interested in sustainable forest management, climate change and associated environmental sciences.

# Sustainable Forestry

## From Monitoring and Modelling to Knowledge Management and Policy Science

Edited by **K Reynolds**, USDA Forest Service, Oregon, USA, **A Thomson**, Canadian Forest Service, British Columbia, Canada, **M Köhl**, University of Hamburg, Germany, **M Shannon**, State University of New York, USA, **D Ray**, Forest Research, Roslin, UK and **K Rennolls**, University of Greenwich, UK

February 2007 576 pages Hardback 978 1 84593 174 2

£85.00/US\$170.00/€135.00

In the context of forest sustainability, this book presents the issues related to both global climate change and conservation of biodiversity. It highlights four methodologies and shows how they contribute in overcoming the ecological challenges facing our world. The practical experience presented can be applied to the implementation of successful sustainable forestry policies.

### Audience:

Researchers in environmental science, ecology conservation, forest management and biometrics. This book also will be of interest to policymakers, professionals, and students in forest management, ecology and environmental sciences.
