

Phytophthora ramorum in larch UK Situation Report

30 April 2018

This report details the situation regarding *Phytophthora ramorum* in the United Kingdom (England, Scotland, Wales and Northern Ireland) at 30 April 2018, unless otherwise stated. The figures apply to larch species only – other species affected by *P. ramorum* are not reported here. Where specified, 'FC woodland' and 'NI FS' refer to public forest and woodland managed by the Forestry Commission or the Northern Ireland Forest Service. 'WGWE' refers to the Welsh Government Woodlands Estate, which is public forest and woodland managed by Natural Resources Wales. 'Non-FC', 'non-WGWE' and 'non-NI FS' refer to woodland and forest in private or other forms of public ownership. 'SPHN' means Statutory Plant Health Notice.

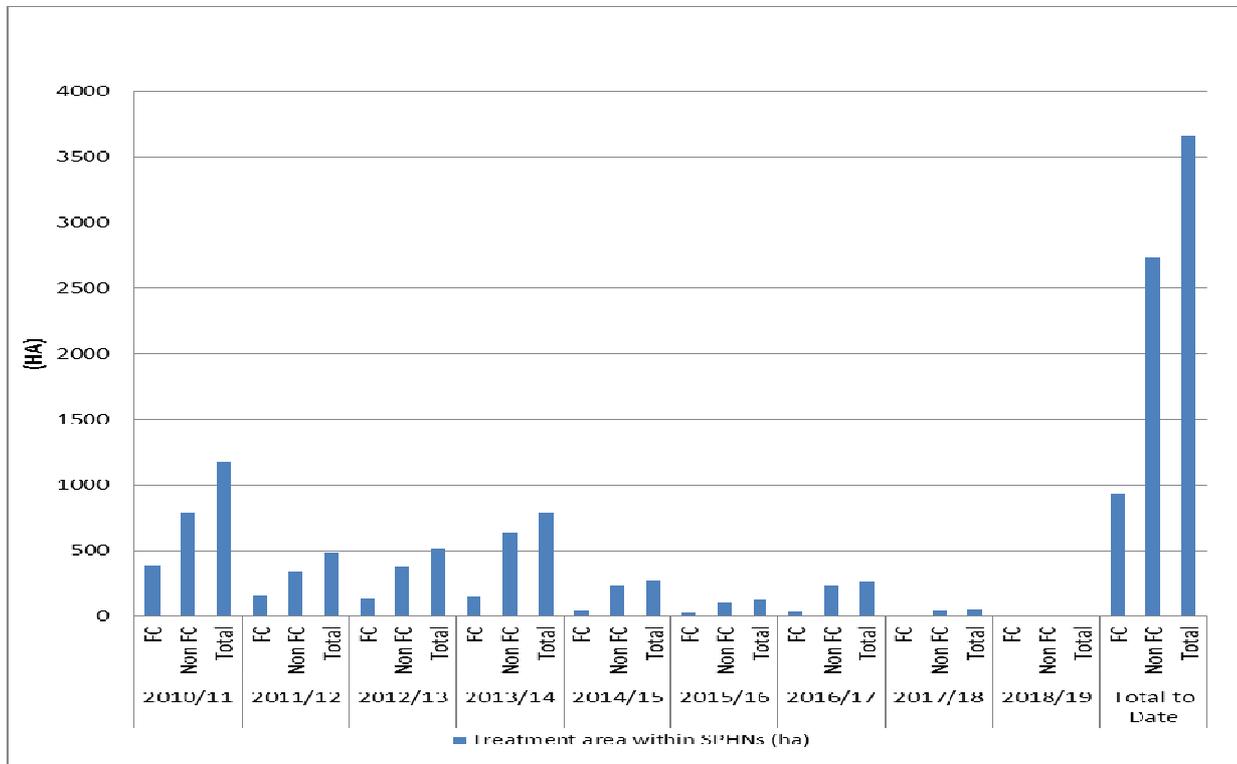

England

Sites investigated and sites where SPHNs have been served. This chart shows numbers of sites which have been investigated compared with sites where SPHNs have been issued, i.e. where infection has been found. See the 'Additional data' section below for data about sites where SPHNs are pending.

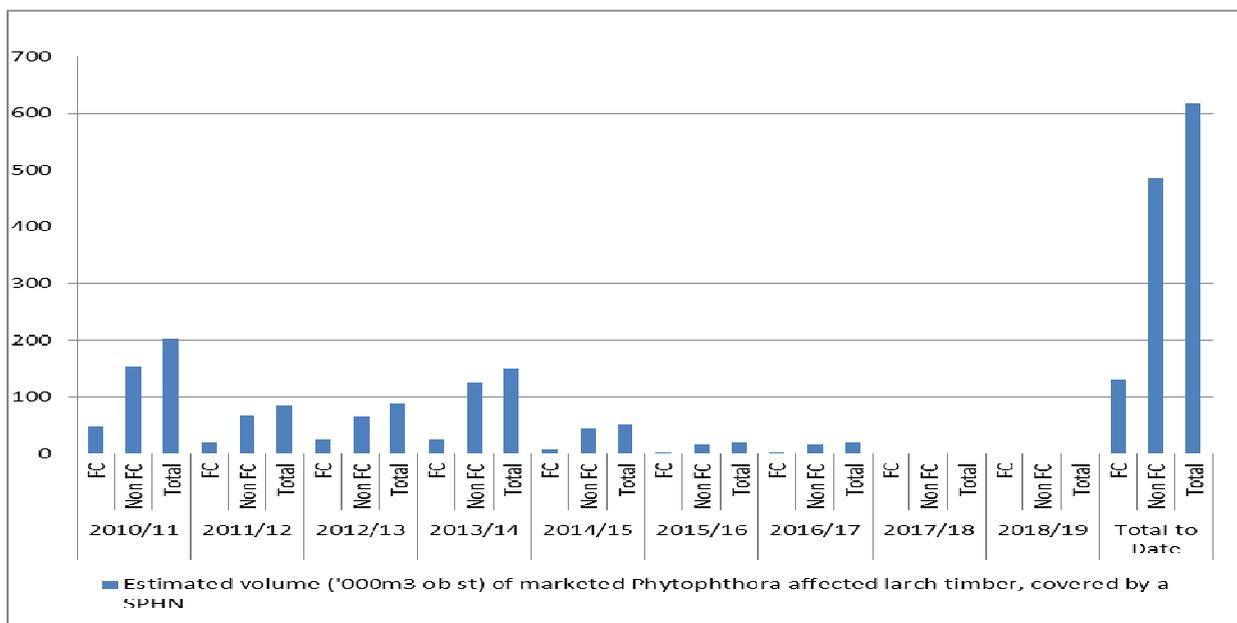

P. ramorum Situation Report 2018

Treatment area within SPHN areas. This chart shows net areas of larch woodland subject to felling or other control measures within SPHN areas.

Estimated volumes ('000m3 overbark standing) of marketed *Phytophthora*-affected larch timber covered by SPHNs

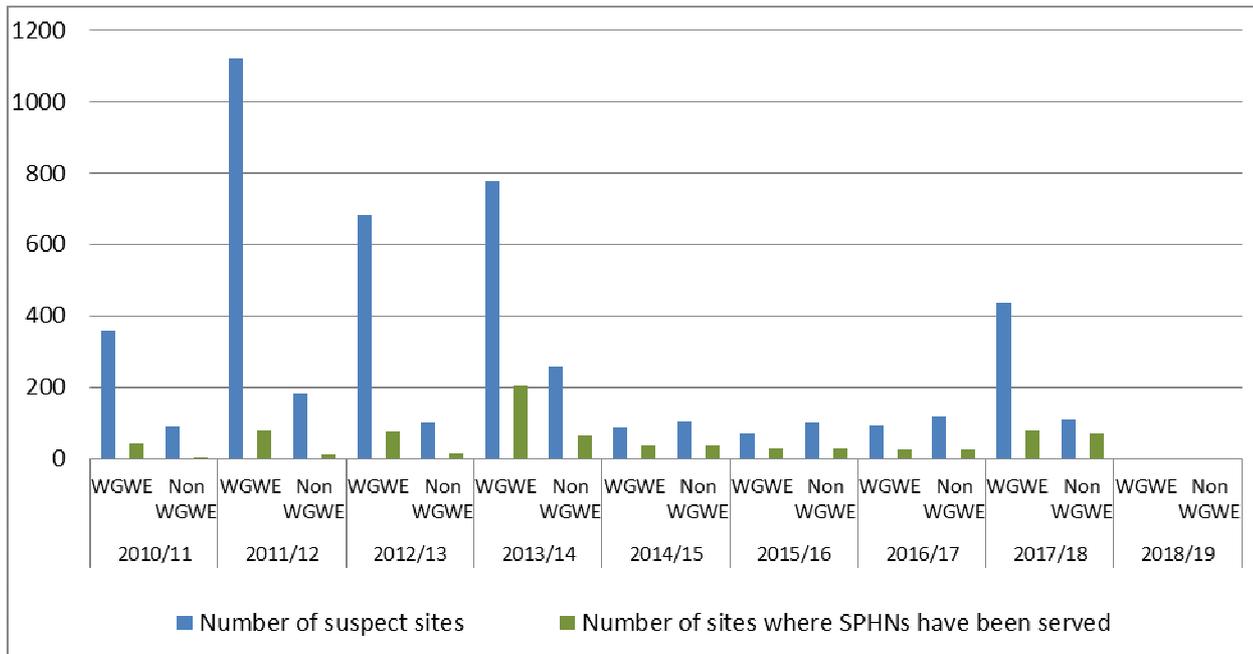

Note: These figures take into account the completion status of the individual sites at the time of publishing.

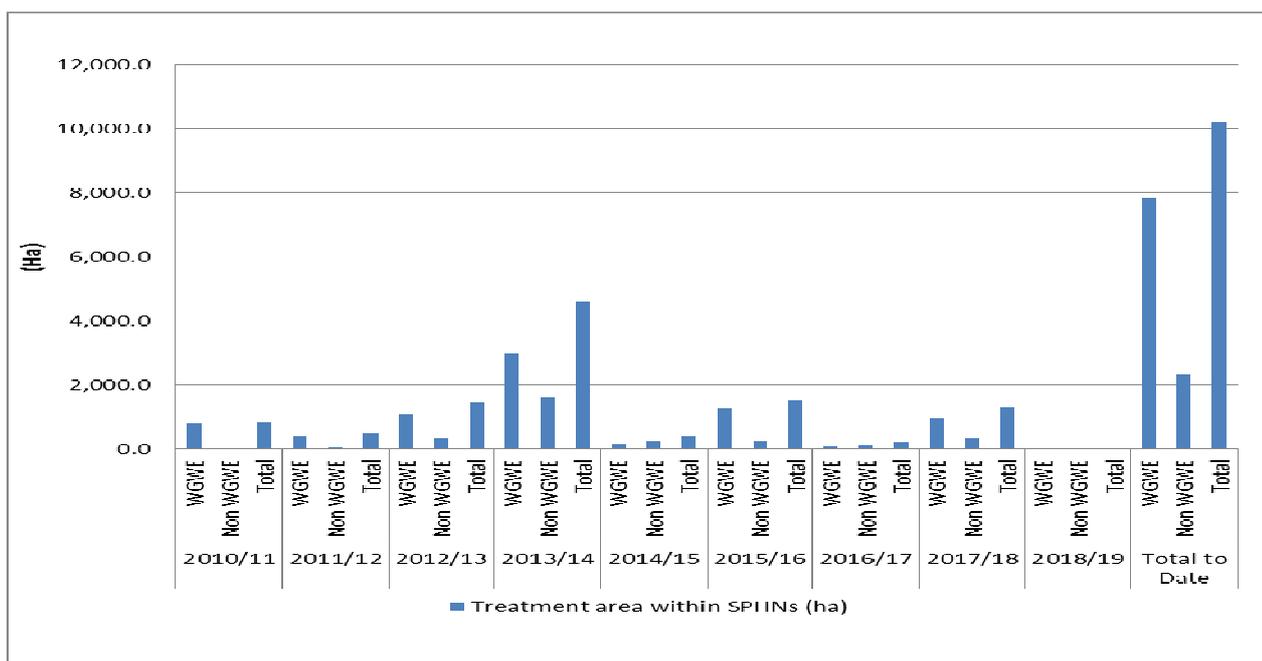

P. ramorum Situation Report 2018

Wales

Sites investigated and sites where SPHNs have been served. This chart shows the numbers of sites that have been investigated compared with sites where SPHNs have been issued, i.e. where infection has been found. See 'Additional data' section below for data about sites where SPHNs are pending.

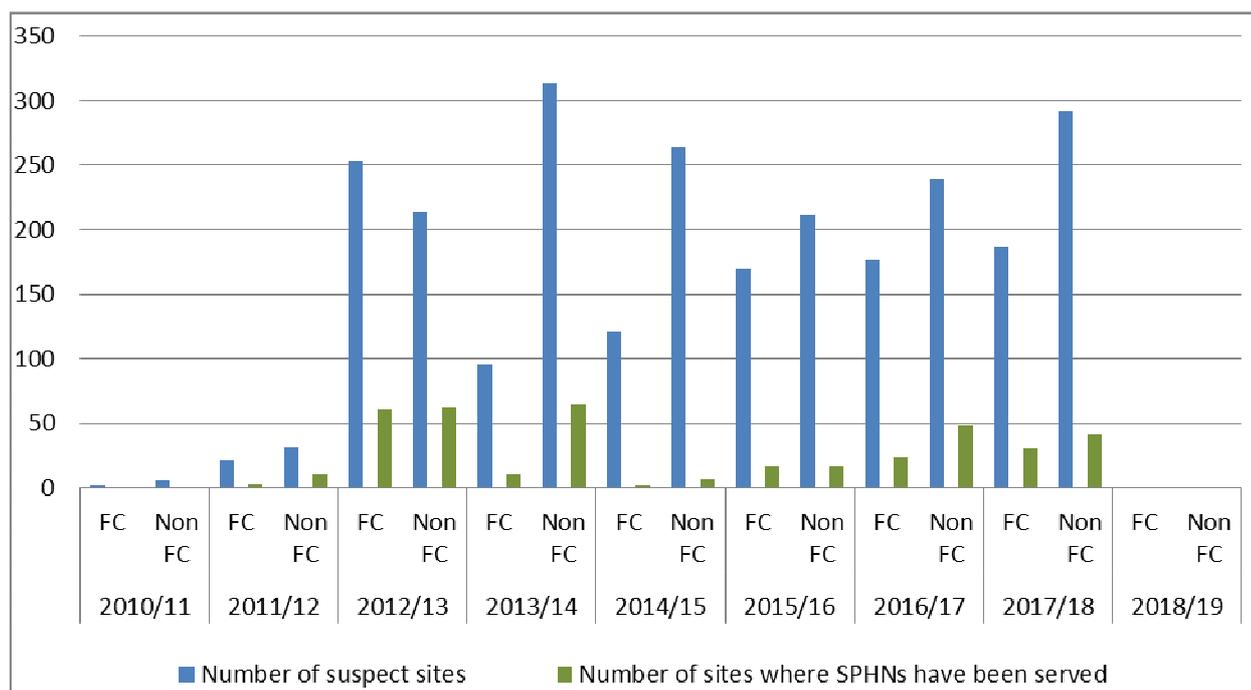

Treatment area within SPHN areas. This chart shows net areas of larch subject to felling or other control measures within SPHN areas, broken down into WGWE and other land.

P. ramorum Situation Report 2018

Scotland

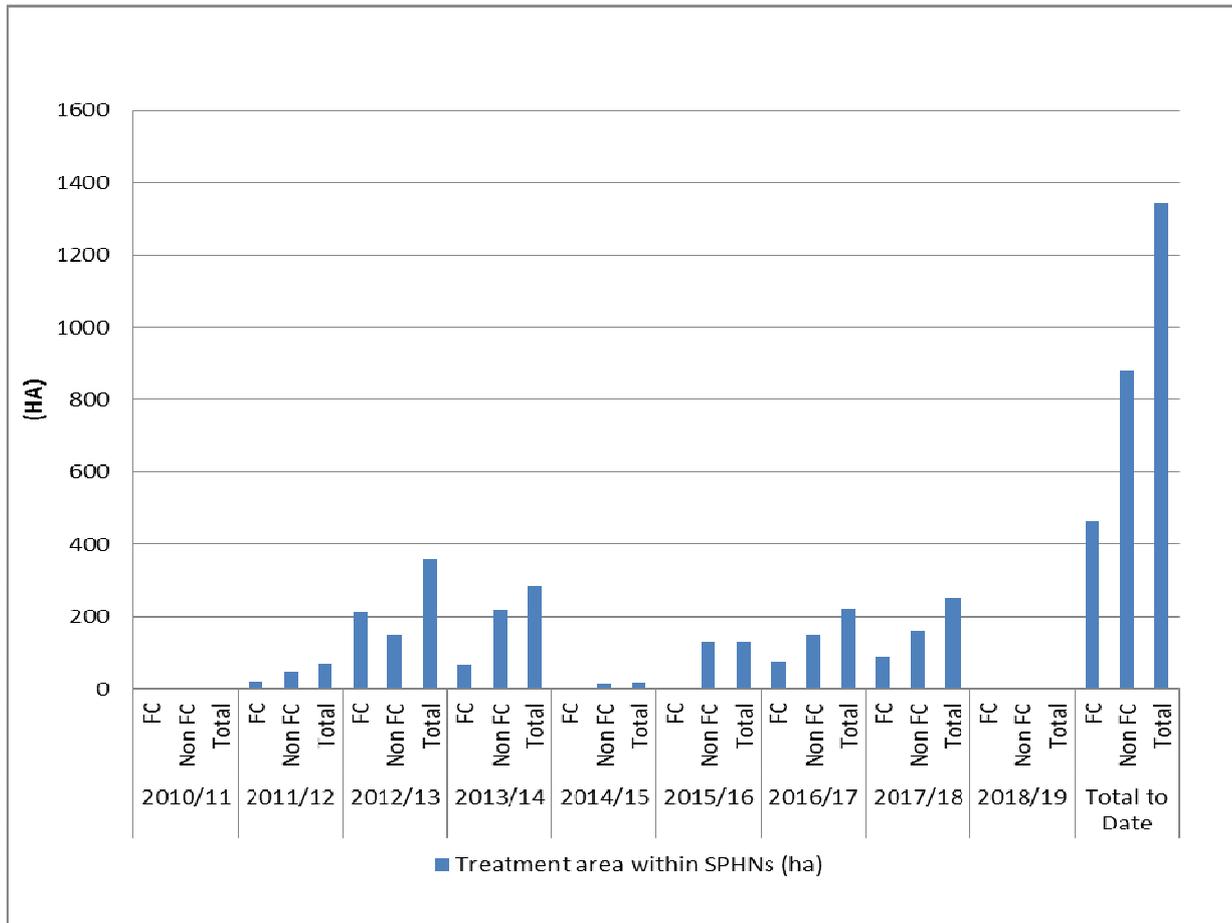

Sites investigated and sites where SPHNs have been served. This chart shows the numbers of sites that have been investigated compared with sites where SPHNs have been issued, i.e. where infection has been found.

Note: The Plant Health (Forestry) (*Phytophthora ramorum* Management Zone) Order 2014 took effect on 5 June 2014. Accordingly, data since then does not include any suspect or confirmed infections within the South West Scotland Management Zone, because SPHNs have not been issued in the zone since that date. The working presumption is that most of the 5,000-6,000ha of larch stands within the zone either have, or soon will have, infection present.

P. ramorum Situation Report 2018

Treatment area within SPHN areas. This chart shows the net areas of larch subject to felling or other control measures within areas covered by SPHNs. It is broken down into privately owned forest and forest managed by the Forestry Commission.

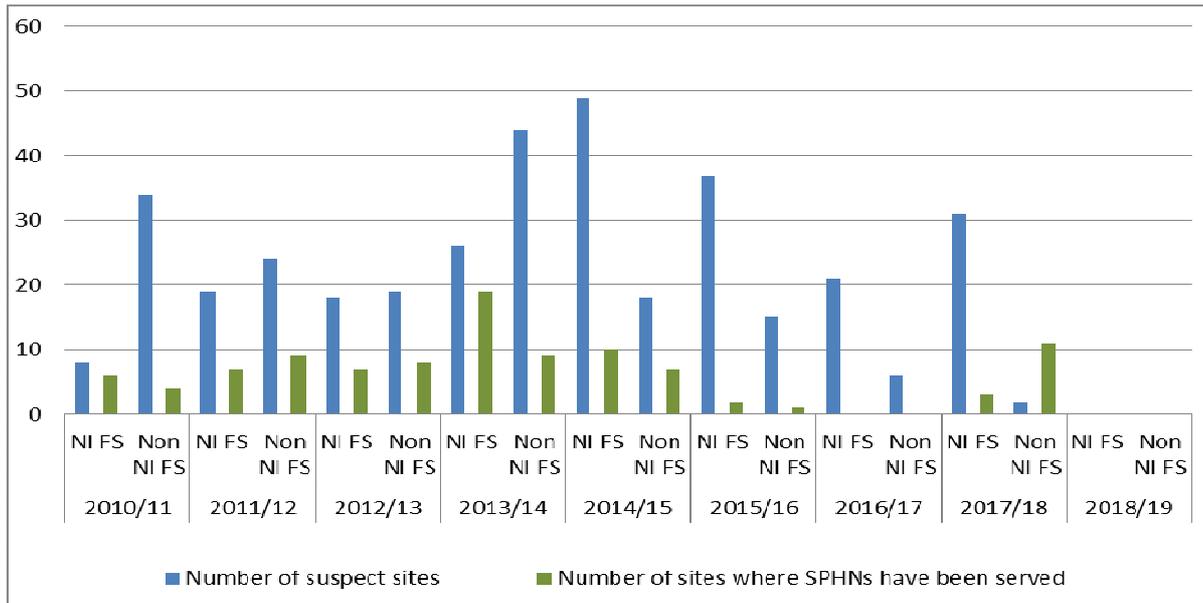

Note: The Plant Health (Forestry) (*Phytophthora ramorum* Management Zone) Order 2014 came into effect on 5 June 2014. Accordingly, data since June 2014 does not include any suspect or confirmed infections within the South West Scotland Management Zone, because SPHNs have not been issued in the zone since the date of the order. The working presumption is that most of the 5,000-6,000ha of larch stands within the zone either have, or soon will have, infection present. Approximately half of the larch within the zone had been felled at 31 March 2016.

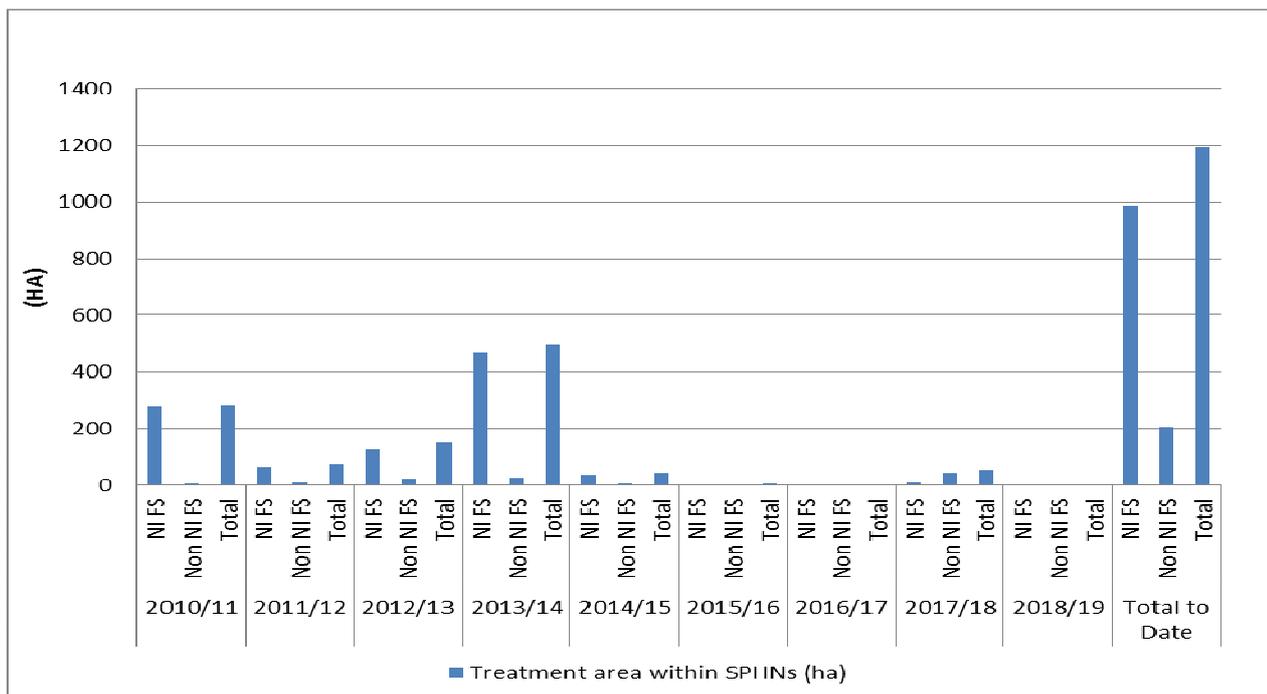

P. ramorum Situation Report 2018

Northern Ireland

Sites investigated and sites where SPHNs have been served. This chart shows the number of sites that have been investigated compared with sites where SPHNs have been issued, i.e. where infection has been found. It is broken down into public forest managed by the Northern Ireland Forest Service (NI FS), and forest in other forms of ownership.

Treatment area within Statutory Plant Health Notice areas. This chart shows the net areas of larch subject to felling or other control measures within SPHN areas. The graph is broken down into public forest managed by the Forest Service and forest in other ownership.

P. ramorum Situation Report 2018

Additional data

Estimated area (Ha) of larch awaiting SPHNs

England 2017/18 (Ha)	FC Non-FC Total	38 29 67
Wales 2017/18 (Ha)	WGWE Non-WGWE Total	188 23 211
Scotland 2017/18 (Ha)	FC Non-FC Total	0 0 0
N. Ireland 2017/18 (Ha)		Unavailable

Note: These figures reflect the area of larch showing sufficient evidence of infection and awaiting SPHNs to be issued as of 30 April 2018. For sites in England a buffer of 100m is used around these 'open' cases to estimate a projected area.
