

Programme

The conference will present the latest results from research that is being conducted into the wood properties of home-grown Sitka spruce. Speakers from Napier University, University of Glasgow and Forest Research will cover the following topics:

- Wood properties of improved Sitka spruce
- Effects of initial spacing on wood properties
- Benchmarking the variation in the wood properties of Sitka spruce
- Effects of tree age on wood properties
- The importance of microfibril angle on the mechanical properties of wood
- Use of acoustic NDT tools to segregate trees and logs early in the supply chain
- Other topics as suggested by members of the forest industry

There will also be an opportunity to discuss the current research and the future research strategy

Registration

There is no charge for the conference. For catering purposes, can you please register via email to John Moore (j.moore@napier.ac.uk)
