

## DELEGATE QUESTIONNAIRE

### Trees in a changing climate

The University of Surrey, Guildford, 14-15 June 2005

The principal aim of the conference was to raise awareness of the issues associated with climate change and tree planting. It is hoped that further consideration will be given to adaptation measures as a result of the meeting.

This brief questionnaire has two purposes: firstly, to gauge the level of climate change awareness in the sector and how successful the meeting has been in achieving its principal objective; secondly, to assess the extent to which the sector is taking climate change into account in future planning. The organisers hope to publish the results of the questionnaire as part of an assessment of adaptation measures in the sector. We therefore ask that the questionnaire is completed as fully as possible.

What was your level of knowledge of the implications of climate change for British woodland before this meeting?

- Non-existent*       *Good*  
 *Poor*                       *Very good /expert*

Has your level of knowledge improved as a result of the meeting? If so, in which areas, in particular?

- Yes*  
 *No*

Had you or your organisation considered any climate change adaptation measures before this meeting? If so, please provide brief details.

- Yes*  
 *No*

Do you think that this meeting will lead to any positive action by your organisation/sector – either in climate change risk assessment or the implementation of adaptation measures? If so, please provide brief details.

- Yes*  
 *No*

Please add any more general comments relating to climate change adaptation
