Country

Using the compass

1. Find North on the compass (the red needle points North)
2. Stand facing North
3. Look at the world map and the compass rose drawn on it – which direction do you need to travel to get from the UK to the tree's country?

.....

4. Find that direction on the compass and point towards it.
5. If you continued moving in that direction you would eventually reach the country the tree has come from!

Tree Miles / Km equation

1. Find the tree's country on the globe from the kit bag.
2. Measure the distance on the globe from that country to the UK in cm with the measuring tape

.....cm.....

3. Scale of the globe

1cm = 465 km or 288 miles

Times the number of cm by either the miles or km using the calculator.

.....

4. This is how far the tree is from it's country of origin.
