## INTRODUCTION

This report contains statistics on removals (harvesting) of roundwood (timber) from forests and woodlands in Britain, and deliveries of this British roundwood to sawmills and other primary wood processing industries.

Roundwood covers all material from forest operations: logs, small roundwood and wood chipped at the harvesting site. Softwood is timber from conifers, such as spruce, pine, fir and larch. Hardwood is timber from broadleaved trees such as oak, beech, ash and sycamore.

The geographic scope is limited to Great Britain – Scotland, England and Wales. Northern Ireland is excluded; trade between Great Britain and Northern Ireland would be recorded here as imports and exports.

Statistics from deliveries to primary wood processing industries are for mills that use British roundwood. Imported roundwood is only identified if it is used by processors that also use British roundwood. Processors that only use imported timber and wood products are outside the scope. Secondary processors, that use sawnwood or woodpulp to produce other wood products (e.g. furniture or paper) are also outside the scope.

## ACKNOWLEDGEMENTS

This report was compiled by the Forestry Commission Economics & Statistics Unit, for the Forestry Commission Advisory Panel (FCAP) Sub-Committee on Supply and Demand. We gratefully acknowledge the assistance of all members of the Sub-Committee and of the associations that they represent.

Mr D M Hughes, Chairman  
Mr A Smith, UK Forest Products Association  
Mr A Christison, UK Forest Products Association  
Mr J Viviani, UK Forest Products Association  
Mr G Webb, UK Forest Products Association  
Mr N Campbell, Timber Growers Association (Scotland)  
Mr W A Willis, Timber Growers Association (England & Wales)  
Mr N Purdy, Forest Enterprise  
Mr S Smith, Forest Research  
Mr R E Selmes, Forestry Commission

## CONVERSION FACTORS

Conversion factors are used to convert between cubic metres (standing, overbark, underbark) and green tonnes (delivered weight, including moisture). The factors used in converting the figures from Sections A and B of this report into the summary Tables are shown below:

1 m <sup>3</sup> softwood standing	= 0.818 green tonnes
1 m <sup>3</sup> hardwood standing	= 0.900 green tonnes
1 m <sup>3</sup> underbark softwood	= 1.018 green tonnes
1 m <sup>3</sup> underbark hardwood	= 1.143 green tonnes

Further details are given in Section G (page 25).

**Table 1 Deliveries of British softwood roundwood**

000 green tonnes

1997	3,764	2,945	6,709	6,646	+63
1998	4,065	2,654	6,719	6,507	+212
1999	4,569	2,628	7,197	6,742	+455

<sup>1</sup> The difference between reported removals and deliveries. This can be caused by variations in the level of stocks between harvesting and delivery to the wood processor, but a consistent difference indicates that statistics for removals and/or deliveries may be unreliable.

<b>1998</b>	724	124	600
<b>1999</b>	685	117	568

<sup>1</sup> Private woodland removals are estimated as Deliveries less FC Removals. There is no survey or data source to obtain data for private woodland hardwood removals.

## A: REMOVALS OF SOFTWOOD ROUNDWOOD

### PRIVATE SECTOR WOODLANDS

The Forestry Commission (FC) carries out an annual survey of some of the largest harvesting companies, to ask for the quantity of softwood removals from private sector woodlands for the last two years. The companies now surveyed are responsible for about 75% of the total of private softwood removals.

The first FC survey was for 1994 when 33 questionnaires were sent out. In 1996 the distribution was increased to 38, a further six companies were added for the 1998 survey and two more for the 1999 survey. Two companies have reported no longer being involved in timber harvesting and have been removed from the distribution list – one after the 1997 survey and one after 1999.

Results are shown in Table 5. The % change on the previous year is calculated using data from those respondents who give figures for two years on their latest return. This % change is used to roll forward the estimated total, which is also expressed as 000 m<sup>3</sup> overbark standing for comparison with forecasts and FC removals.

**Table 5 Private sector softwood removals survey**

Year	Respondents / survey distribution	Respondents only		% change on previous year	Estimated total	
		Latest year 000 green tonnes	Previous year 000 green tonnes		000 green tonnes	000 m <sup>3</sup> ob standing
1994	33 / 33 (100%)	1,639	1,333	+23%	2,476	3,027
1995	24 / 33 (73%)	1,515	1,306	+13%	2,710	3,313
1996	32 / 38 (84%)	1,539	1,601	- 4%	2,634	3,220
1997	26 / 38 (68%)	1,559	1,388	+12%	2,945	3,600
1998	30 / 43 (70%)	1,409	1,563	-10%	2,654	3,245
1999	39 / 45 (87%)	1,836	1,858	-1%	2,628	3,213

Table 6 below compares forecast and reported removals from private sector woodlands. The “reported” figures up to 1996 were calculated from the % changes reported in a small survey carried out by the Timber Growers Association (TGA); it was agreed that the FC survey should be used for this purpose from 1997. Forecasts are based on published forecasts of softwood availability for private woods interpolated for the years between the 5-year averages; for 1995 to 1998 this used the 1995 Softwood Assessment (*Rothnie & Selmes, 1996*). For 1999, it takes account of the new forecasts for Scotland (*Smith & Gilbert, 1999*) and Wales (*Smith & Gilbert, 2000*) based on the new National Inventory of Woodlands.

**Table 6 Private sector softwood removals:**

<b>000 m<sup>3</sup> overbark standing</b>			
<b>Year</b>	<b>Forecast</b>	<b>Reported</b>	<b>% of forecast</b>
<b>1986</b>	1,810	1,480	82

## FORESTRY COMMISSION WOODLANDS

Forest Enterprise reports figures for planned and actual removals. Forecasts are interpolated for the years between the 5-year averages; for 1995 to 1998 this used the 1995 Softwood Assessment (*Rothnie & Selmes, 1996*). For 1999, it takes account of the new forecast for Scotland. Statistics on volumes of timber harvested are available for Forestry Commission woodlands, from administrative records maintained by Forest Enterprise, converted from recorded quantities of sales to estimated standing volumes using specific factors. In Table 7 below, planned and reported removals are shown as % of the forecast.

**Table 7 Forestry Commission softwood removals**

Year	Forecast <sup>1</sup>	Planned <sup>1</sup>		000 m <sup>3</sup> overbark standing Reported	
	000 m <sup>3</sup> ob	000 m <sup>3</sup> ob	% of forecast	000 m <sup>3</sup> ob	% of forecast
1986	3,187	3,107	97	3,149	99
1987	3,260	3,211	98	3,345	103
1988	3,415	3,457	101	3,464	101
1989	3,435	3,564	104	3,488	102
1990	3,530	3,602	102	3,460	98
1991	3,603	3,872	107	3,760	104
1992	3,682	3,859	105	4,059	110
1993	3,763	3,848	102	4,141	110
1994	3,880	4,100	106	4,320	111

1996	4,360	4,448	102	4,302	99
1997	4,490	4,458	99	4,602	102
1998	4,620	5,022	109	4,969	108
1999	5,090	5,312	104	5,586	110

<sup>1</sup> Forecast and planned figures are for financial years, commencing in April of the year shown. Reported removals are for calendar years, except for 1995, which is for the financial year 1995/96.

## TOTAL: PRIVATE WOODLANDS AND FORESTRY COMMISSION

Total softwood removals in 1999 were 7% up on 1998; 63% of the total was from Forestry Commission woodlands.

**Table 8 Total softwood removals: private woodlands + Forestry Commission**

Year	000 m <sup>3</sup> overbark standing			
	Forestry Commission	Private woodlands	Total	% FC
1996	4,302	3,220	7,522	57%
1997	4,602	3,600	8,202	56%
1998	4,969	3,245	8,214	60%
1999	5,586	3,213	8,799	63%

## B: GB SAWMILLS - ANNUAL SURVEY 1999

This section gives results for timber consumption and sawnwood production from the Sawmill Survey for 1999.

### Survey Responses

In the 1999 Survey 406 questionnaires were sent out. Following various reminders, including a letter from the UK Forest Products Association to their members, and a final telephone call to the largest non-respondents, 244 questionnaires were returned, a response rate of 60%.

The latest estimates for consumption and production in the last six years, including estimates for non-respondents, are shown in Table 9 expressed in thousand cubic metres underbark for consumption, and thousand cubic metres sawnwood for production. Estimates for 1994-1998 have been revised to include estimates for sawmills that reported data for the first time in 1999, and to take account of earlier mill closures notified in the 1999 survey.

**Table 9: Consumption and production 1994 - 1999**

			<b>1994</b>	<b>1995</b>	<b>1996</b>	<b>1997</b>	<b>1998</b>	<b>1999</b>

	production	000 m <sup>3</sup>	1,923	1,901	1,921	1,984	2,003	2,162
<b>Hardwood:</b>	consumption	000 m <sup>3</sup> ub	316	332	260	261	229	207
	production	000 m <sup>3</sup>	180	191	153	144	127	120

## Number of sawmills

Based on all the 1999 survey responses, together with data from previous years for those who did not respond for 1999, it is estimated that there were 336 sawmills processing British timber in 1999, of which 182 produced at least 1000 m<sup>3</sup> sawnwood. Of those 182 mills, 121 processed softwood only, 14 hardwood only, and 47 both hardwood and softwood. Of the 154 smaller mills, 73 processed softwood only, 17 hardwood only, and 64 both hardwood and softwood.

**Table 10: Number of sawmills 1994 - 1999**

## British Softwood

Consumption of British softwood (in thousand cubic metres underbark) and production (in thousand cubic metres sawnwood) are shown in the following tables, including estimates for non respondents. Total softwood consumption was 3.88 million m<sup>3</sup> underbark and sawn softwood production was 2.16 million m<sup>3</sup> sawnwood. These were both up around 8% on 1998.

Apparent recovery (calculated as the ratio of sawnwood production to underbark log consumption) was 56% - the same as 1998.

## British Hardwood

Consumption of British hardwood (in thousand cubic metres underbark) and production (in thousand cubic metres sawnwood) are shown in the following tables, again including estimates for non respondents. Results for the larger categories are combined, to avoid disclosure of individual returns. Total hardwood consumption was 207 thousand m<sup>3</sup> underbark and total sawn hardwood production was 120 thousand m<sup>3</sup> sawnwood, slightly down on 1998. Apparent recovery is 58%, the same as 1998.

**Table 12a : Hardwood consumption**

	000 m <sup>3</sup> underbark				Total
	Sawmill size category (000 m <sup>3</sup> total production: hard + soft)

Wales	1	4	0	0	5

## Summary

Tables 13a and 13b (on the next two pages) give summaries of production and consumption, for softwood and hardwood, for the years 1988 to 1999, together with figures for 1983 and 1980. Before 1994 all Sawmill Survey results excluded mills producing less than 1000 m<sup>3</sup> per year (500 m<sup>3</sup> for 1980 and 1983).

## Imported Round Timber

It is estimated that 15 mills used imported round timber in 1999, totalling 2,300 m<sup>3</sup> ub softwood and 4,600 m<sup>3</sup> ub hardwood. This is based on responses for 1999 and estimates for non-respondents that had reported using imported round timber in earlier years. Two mills, that reported a combined total consumption of over 20,000 m<sup>3</sup> ub imported softwood in 1998, both reported using no imported timber in 1999.

1999	1,150	224	660	191	0	0	9	0	295	0	964	191

<sup>1</sup> British roundwood includes all material from forest operations.

<sup>2</sup> Sawmill co-products includes peeled and unpeeled chips, sawdust, slabwood, shavings, postplant chips and peelings.

<sup>3</sup> 1987 data are based on consumption, not deliveries.

<sup>4</sup> Softwood capacity was reclassified from 1995.

.. Data not available

## D: WOODBASED PANEL PRODUCTS

Figures for woodbased panel products are supplied by the UK Forest Products Association.

Estimates of the country of origin of British roundwood were compiled for the first time for 1999, and are shown in Table 16.

**Table 16 Origin of British roundwood for woodbased panel products (estimated)**

Year	000 green tonnes			
	Great Britain	Scotland	England	Wales
1999	1,665	1,087	408	170

### Particleboard

The figures given in Table 18 are combined totals for Particleboard (wood chipboard and cement bonded particleboard) and for Oriented Strand Board (OSB). In 1999 the Particleboard Industry used 1.3 million tonnes of British roundwood and 0.8 million tonnes of sawmill co-products.

### Fibreboard

Total fibreboard manufacture in 1999 used 0.3 million tonnes of British roundwood and 0.7 million tonnes of sawmill co-products.

Table 20a gives figures for Medium Density Fibreboard (MDF) manufacturers and Table 20b gives figures for 'other fibreboard' manufacturers up to 1997. Both Tables are discontinued, as separate figures are no longer available.

## E: MISCELLANEOUS PRODUCTS

### ROUNDWOOD FENCING MANUFACTURERS

Surveys of roundwood fencing manufacturers have been carried out for each year since 1993. In preparation for the 1995 survey, many more fencing manufacturers were identified, extending the list from around 70 to around 130. The survey is now believed to give a good coverage of softwood fencing, but only a very limited coverage of hardwood (around 1,000 tonnes in total for 1999, compared with the Sub-Committee's estimate of around 30,000 tonnes).

For 1999, questionnaires were sent out to 139 manufacturers and 91 responses were received (65% response); 30 were nil returns or reported closing down during the year. The softwood figures reported by the 61 active respondents to the 1999 survey totalled 222,000 tonnes.

Based on the 1999 survey, including estimates for non-respondents, it is estimated that in 1999 there were 94 manufacturers using a total of 362,000 tonnes of softwood, a slight increase from 1998. This estimate uses the actual figures (222,000 tonnes) reported for 1999 by the 61 respondents, and adds on 140,000 tonnes for the 33 non-respondents who had responded either in 1994, 1995, 1996, 1997 or 1998, assuming no change from their previous figure. Adding on 30 nil returns and 15 assumed nil returns for non-respondents brings the total to the distribution list's 139 total.

Figures for all years, broken down by size category, including estimates for non-respondents, are shown below.

**Table 21 Softwood round fencing**

#### Number of manufacturers

Year	Size category (green tonnes p.a.)				Total
	Under 1,000	1,000-4,999	5,000-9,999	10,000+	
1994 <sup>1</sup>	68	35	19	10	132
1995	67	43	13	9	132
1996	56	43	13	8	120
1997	45	42	8	10	105
1998	43	45	6	8	102
1999	38	41	6	9	94

#### British roundwood purchased

000 green tonnes

Year	Size Category (Green Tonnes p.a.)				Total
	Under 1,000	1,000-4,999	5,000-9,999	10,000+	
1994 <sup>1</sup>	17	76	126	187	406
1995	17	77	115	178	387
1996	17	92	87	141	337
1997	18	92	53	160	323
1998	14	104	42	194	354
1999	11	93	40	217	362

<sup>1</sup> 1994 includes estimates for those added to the survey mailing list for 1995

## SUMMARY FOR MISCELLANEOUS PRODUCTS

### Softwood

For softwood fencing the figures shown in Table 22 are based on the Fencing Surveys for 1993 to 1999 and a Sub-Committee estimate for 1992. Woodwool figures are reported by the manufacturers. All other figures are estimates by the Sub-Committee. Softwood round mining timber, which used to be shown separately, is now included in the “other” category.

**Table 22 Miscellaneous uses of British roundwood**

	<b>000 green tonnes</b>					
	<b>Fuelwood</b>	<b>Poles</b>	<b>Woodwool</b>	<b>Fencing</b>	<b>Other</b>	<b>Total</b>
<b>1992</b>	100#	30	8	186#	41	<b>365</b>
<b>1993</b>	100#	30	8	237*	35	<b>410</b>
<b>1994</b>	100#	4#	7	406	25#	<b>542</b>
<b>1995</b>	100#	4#	5	387	25#	<b>521</b>
<b>1996</b>	100#	4#	5	337	25#	<b>471</b>
<b>1997</b>	100#	4#	4	323	25#	<b>456</b>
<b>1998</b>	100#	4#	4	354	25#	<b>487</b>
<b>1999</b>	100#	4#	3	362	25#	<b>494</b>

\* Original survey result for 1993 (not revised to adjust for limited scope of survey)

# Estimated by Sub-Committee.

### Hardwood

No firm data are available for miscellaneous uses of hardwood. The Sub-Committee estimates that, for each year since 1992, around 150,000 green tonnes is used for fuelwood, around 30,000 green tonnes for round fencing and around 25,000 for other uses, a total of 205,000 green tonnes.

## F: ROUNDWOOD EXPORTS

Table 23 Pulpwood exports

Year	000 green tonnes			
	Great Britain	Scotland	England	Wales
1987	396	301	85	10
1988	267	104	163	0
1989	168	73	95	0
1990	59	34	25	0
1991	66	38	28	0
1992	66	45	21	0
1993	15	11	4	0
1994	48	46	2	0
1995	8	8	0	0
1996	0	0	0	0
1997	0	0	0	0
1998	0	0	0	0
1999	24	24	0	0

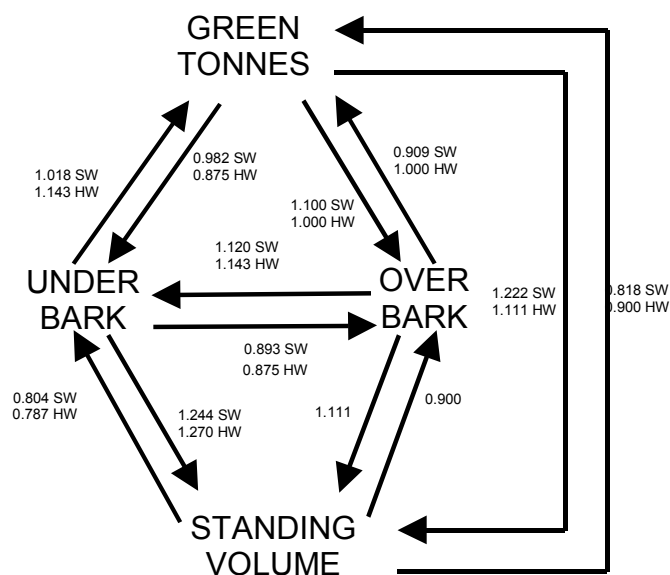

Data are not collected for export of logs.

## G. CONVERSION FACTORS

### CUBIC METRES AND GREEN TONNES

Conversion factors were used in this report to convert between cubic metres (standing, overbark, underbark) and green tonnes (delivered weight, including moisture). These are illustrated in the following diagram (where different factors apply to softwood and hardwood, these are marked SW and HW). Factors are generalised, based on a range of different types of timber and processing methods. They are shown to 3 decimal places to ensure the diagram balances.

**Figure 1: Conversion factors between cubic metres and green tonnes**

### WOOD RAW MATERIAL EQUIVALENT

A revised set of factors that indicates the volume of standing tree crop (wood raw material equivalent - WRME) needed to produce one unit of a final product was published in 'Revised Forecasts of the Supply and Demand for Wood in the UK' by Adrian Whiteman (FC Technical Paper 19, 1996). The factor for paper products includes an allowance for the proportion of recycled paper manufactured in the UK. The factors are shown below:

**Table 24 Conversion factors to WRME**

Product	Measurement Unit	Factor to WRME
Fuelwood and charcoal	m <sup>3</sup>	1.25
Other industrial roundwood	m <sup>3</sup>	1.25
Softwood sawnwood	m <sup>3</sup>	2.13
Hardwood sawnwood	m <sup>3</sup>	2.09
Newsprint	tonnes )	4.30
Printing and writing paper	tonnes )	
Other paper and paperboard	tonnes )	
Plywood	m <sup>3</sup>	3.67
Fibreboard	m <sup>3</sup>	2.35
Particleboard	m <sup>3</sup>	1.61
Veneer sheets	m <sup>3</sup>	3.67

- Notes
1. The charcoal conversion factor is for volume to volume. About 7.8 m<sup>3</sup> of wood is required to make one tonne of charcoal, but one tonne of charcoal is equal to about 6 m<sup>3</sup> in volume.
  2. The conversion factor for Oriented Strand Board (OSB) is higher than for other types of particleboard, and the average for particleboard has been constructed by assuming that OSB is 25% of the total.
