

Summary Report

Woodfuels Summary Table

	Forest and Woodland (ODT)	Arboricultural Arisings (ODT)	Short Rotation Coppice (ODT)	Primary Processing Co-Products (ODT)
West Midlands	214,149	31,095	388	100,460

Figures are given in oven-dry tonnes. Woodfuel will never be delivered at this moisture content. Typical moisture contents will vary from 50-60% (measured on a fresh weight basis) for harvesting brash to 25-30% for conditioned woodchips. Figures are estimates of the annual sustainable production that can be made available taking account of technical and environmental constraints. They do not take account of economic or market constraints.
