3. Statement of our Requirements

We will be awarding a contract for mowing of verges on Forestry Commission access roads, and for mowing of grass rides.

Our intention is to award this contract for a period of 4 years

Break points are available within the contract at annual intervals, at which time we will decide on whether the contract will continue.

The decision on whether to use the break points or any or all of the extension option available will be at our discretion and we will base it on the following factors -

- performance
- budget availability

The total value of this contract over the entire period, including any extension options, will be in the region of £48,000.

Contract Description

The mowing of access roadside verges and of grass rides within the forest by use of such equipment as tractor & parmiter will be carried out in the woodlands listed below (also refer to attached contract maps). Area measurements and estimated areas for roads and rides are given below.

The prescription is as follows:

Sherwood South

Roads and tracks - to cut the full width of all road edges to crop trees where possible avoiding damage to broadleaf trees which are present within this area. Estimated on average as a 2m swathe on each side of the road and therefore requires 2 passes depending on the width of the machine used. Large woody vegetation may restrict access in places.

Rides - to cut the full width of the forest rides from ditch edge/crop trees to ditch edge/crop trees. This is estimated to be on average a 4m swathe to be cut, therefore requiring 2 passes depending on the width of the machine used.

Sherwood North:

Roads - to cut the full width of all road edges to crop trees where possible avoiding damage to broadleaf trees which are present within this area. Estimated on average as a 4m swathe on each side of the road and therefore may require 4 passes depending on the width of the machine used. Large woody vegetation may restrict access in places.

Rides - to cut the full width of the forest rides from ditch edge/crop trees to ditch edge/crop trees. This is estimated to be on average a 4m swathe to be cut, therefore requiring 2 passes depending on the width of the machine used.

All sites:

The vegetation to be cut is approximately 12-18 months growth and should be cut as evenly as practically possible, down to a height of between 5 and 10 cm. (As low as possible without causing screefing or scraping).

Surface quality and access varies and the contractor should familiarise themselves with the sites. Machine breakdowns and/or damage will remain the responsibility of the contractor. The Contractor will be notified of any site hazards known to the Forestry Commission.
